AKINBO JERRY
07/04/2025

1. Check the internet, re-enter email credentials, ensure sync is on, remove & re-add account if needed.
2. Check Wi-Fi, IP settings, adapter status, restart device, reconnect to network.
3. Run Office Repair, check Event Viewer logs, install latest updates, create new user profile.
4. Disconnect from the network, run an antivirus scan, quarantine/remove threats, reimage if needed.
5. Widen the columns or double-click column edge, check for negative date/time values.
6. Connect router, access via 192.168.1.1, set SSID/password, configure WAN settings, test connection.
7. Run defrag C: or use Disk Defragmenter tool to check fragmentation status.
8. Use recovery software (e.g., Recuva), avoid writing to the disk, attempt recovery ASAP.
9. ls (list), cd (change dir), cp (copy), mv (move), rm (delete), chmod (permissions),
   chown (ownership), grep (search), top (processes), df (disk usage)
10. OS updates, antivirus setup, user profile config, app installs, security policies applied.
11.

- **Elon Musk** – CEO of Tesla, SpaceX, tech innovator
- **Michael Dell** – Founder of Dell Technologies
- **Paul Allen** – Co-founder of Microsoft
- **Steve Wozniak** – Co-founder of Apple
- **Sim Shagaya** – Nigerian tech entrepreneur, founded Konga

Note:
The DevOps course on Alison.com was inaccessible due to a persistent loading error ("Sorry, we are having a little trouble"). I attempted access via both browser and the mobile app but was unsuccessful. However, I proceeded to answer all questions independently using my current knowledge and research.
